Control Your Temperature, Increase Your Performance

Do you have a hard time controlling the temperature in your office? Not anymore, this little gadget will cool you down or heat you up at the touch of a button.

By John Lincoln

C2 is a simple-to-use, personal climate-control device offering efficient heating and cooling options that support individual preferences by allowing users to control their environment. No more arguments over the thermostat. Just plug C2 into an outlet and choose a setting that is comfortable for you. Easy to use, easy to move, and easy to adjust. How cool.

Herman Miller designer Bill Stumpf had this to say: "The human body has some very narrow margins when it comes to being comfortable. If your shoe is uncomfortable, you're aware of it. So how you get people to a point of comfort is you make them unaware...and that's not easy to do."

The C2 is one of several products in the Be Collection aimed at keeping you comfortable. Using advanced thermal electric technology, it offers both heating and cooling settings so you can stay comfortable no matter who's in charge of the room thermostat. That's important, because temperature control is ranked among the top 10 work environment qualities that have the strongest effect on job performance.

On top of its exceptional heating and cooling abilities, C2 also filters the air and intercepts particles as small as five microns, like pollen, dust, and pet dander. In addition, there are no exposed heating coils, chemicals, or harmful emissions; an automatic timer shuts it off after four hours and no water or recharging is required.
